

Adult Dysfluency Service

What is it?

A service for adults aged 18 or over who suffer with a stammer or stutter. This is also known as dysfluency.

What can we offer you?

You will be assessed by a Speech & Language Therapist at Mount Gould Hospital. The therapist will ask you about how your speech impacts on your life. You can discuss the options available and agree what goals you can work towards in therapy.

How do I get an appointment?

You need to be referred by a medical professional such as your GP. When we have received your referral, we will send you a letter when an appointment becomes available.
